## OCEANVIEW NOW LIGHTING UP NZ WATERS

### VEI MARINE DISPLAY SYSTEMS

and OceanView Night-Vision cameras are now available in New Zealand through leading marine electronics distributor Electronic Navigation Limited (ENL). American marine electronics company VEI, produce a wide range of marine display screens, marine computers

and night-vision/thermal camera systems – OceanView.

“Experienced boaters know that you don’t always have the convenience of operating your vessel in perfect conditions (lighting). OceanView’s line of combination thermal imaging, low-light and color cameras gives you the ability to operate in total darkness, pouring rain, fog or glaring sunlight, providing safer navigation,” says Hodson.

“OceanView will let you see what the radar doesn’t.”

The newest product in its extensive line-up of multi-sensor night-vision camera systems; is the Apollo II HD - the Highest Definition Thermal Imaging camera available in the marketplace today.

The thermal image in HD is clearer and more detailed than comparative systems.

As well as Thermal Imaging, the low-light sensor amplifies even barely discernable light to render a crisp detailed picture in almost total darkness. The combination of thermal and low light in one unit makes boating more safe and enjoyable and extends the day into total darkness. Floating debris, channel markers and other vessels are easy to identify. Looking out for unlit or semi-submerged objects in passage or for maneuvering in unknown waters and anchorages just got a whole lot easier. The camera has an on-control-unit camera position indicator and a home button. With the new LCD control unit, the user has fingertip control and a clear view of the simple menu.

## TICA JIG KING RODS

**TiCA Jig King** rods are constructed using high modulus graphite composite materials to be light weight and give immense lifting power; ideal for dealing to XOS Kingfish. The parabolic action is perfect for Japanese style speed jigging. The blanks are fitted with new generation ALPS XN guides which incorporate a S-6 316 stainless frame with deep pressed ceramic inserts to prevent damage.

Hi density EVA grips, graphite channel-lock palm swell grip and a bespoke alloy insert and gimbal finish the rod build. These Jig King rods were spec'd by Kilwell staff to suit NZ fishing conditions and carry a 12 month warranty against faulty materials and workmanship. To suit three separate jig weights the rods are available in; 5'6" 250g, 5'3" 350g and 5' 450gm.
